Profile

I am a third-year Computer Science student with a strong interest in developing innovative software solutions that improve user experience and solve real-world problems. My academic background is supported by practical experience in software development, C++/C# programming, web technologies, and embedded systems.

I have completed internships where I contributed to the development of a large-scale event registration system and worked on core C++ programming tasks. My project work includes a smart pharmacy system that integrates web and embedded technologies, a Python-based resource allocation and deadlock detection tool, a full-featured art gallery e-commerce website, and a 2D game developed in C++ with AI-driven gameplay mechanics.

My technical skills include proficiency in C#/C++, Python, HTML, CSS, JavaScript, PHP (OOP and MVC), MySQL, and Arduino. I have also obtained certifications from reputable institutions such as AWS, IBM, and Google in areas like cloud computing, MongoDB, and code optimization.

I am eager to apply my skills in dynamic, fast-paced environments and to continue learning and growing as a developer. I welcome opportunities to contribute to impactful projects and collaborate with like-minded professionals.

Education

High School Diploma, Mathematics at Rowad El-Mostaqbal Languages School, Cairo, Egypt

Grade: Very Good

Student, Computer Science at Modern Sciences and Arts University (MSA), Cairo, Egypt

September 2023 - January 2027

Student, Computer Science at University of Greenwich, London, England

September 2023 - September 2027

Experience

Software Engineer at Advanced Computer Technology (ACT), Cairo, Egypt

August 2025 - December 2025

Software Developer Trainee at Advanced Computer Technology (ACT), Cairo, Egypt

July 2025 - August 2025

Worked as part of the development team on an Employment Management System designed to manage and organize CVs across the company. The system enables HR to search, filter, and shortlist candidates based on specific requirements, as well as schedule interviews, reject applications, or keep candidates on hold for future opportunities.

Additionally, contributed to the PMS (Property Management System) team, where we worked with OPERA, a leading hotel management solution, and gained hands-on experience testing and exploring its core functionalities for hotel operations.

Internship Trainee at CIB Egypt, Cairo, Egypt

August 2025 - September 2025

CIB Summer Internship 2025

Completed a multidisciplinary internship program covering sustainable finance, artificial intelligence & ethical AI, and innovative IT solutions. Acquired practical experience through interactive workshops

with international partners, developing strong skills in ESG strategies, data analysis, and responsible technology implementation.

**Software Development Intern – Event Registration System at Values Group, May 2025 - May 2025
Cairo, Egypt**

Developed the complete registration system for the Grand Marriage Show Expo during a 3-day internship. Collaborated with a teammate to deliver a working solution under tight deadlines in a live event environment.

Honors & awards

Third Place – Deep Minds Competition at MSA University, Cairo, Egypt July 2025

Achieved 3rd place with my team in the Deep Minds competition for our innovative Pharmacy Management System. The project combined real-world data and user-focused design to streamline prescription handling, inventory tracking, and customer interaction. It demonstrated strong technical skills in PHP, HTML, CSS, JavaScript, and MySQL, as well as teamwork and problem-solving under a competitive setting.

The Bad Use Of Deepfake On Ignorant people AT Intelligent Methods, Systems, and Applications (IMSA 2025) (IEEE)

April 2025

Deepfake technology has spread rapidly due to the spread of artificial intelligence, as it is an essential tool in it. The use of deepfake is not limited to honorable, entertainment, and educational purposes, but rather ignorant people have used it in a bad way, as it has become a weapon that can distort reputations, spread false information, or even manipulate public opinion. It is also not limited to the individual, but rather causes significant harm to society, as it can threaten the integrity of elections and the personal and professional lives of the victims of this exploitation. It also opens the door to deliberate smear campaigns that may be used for blackmail or to silence dissenting voices. However Victims are often ignorant of their rights, both morally and legally, in this heinous act by people who misuse deep fakes, or they do not have sufficient evidence to hold these ignorant people accountable. On the other hand, current technology is unable to distinguish between truth and falsehood due to the continuous development of this technology. Therefore, awareness must be spread about how to protect against this type of threat by implementing educational programs for all segments of society about deep fakes.
